

RTX Corporation (RTX) PDF Brief

Veritas finance-first fixed-layout brief

VERITAS ALERT: RTX closed at \$174.26 on 2026-04-24. Current status: **DO NOT DEPLOY**. Price is below all three key moving averages and the technical structure has not yet repaired.

1. Executive Summary

RTX Corporation remains a serious large-cap company with real scale, institutional support, and durable relevance in Industrials / Aerospace & Defense. Analyst context remains constructive, with a mean target of \$215.06, 22 analysts, and a rating of 2.1 - Buy.

At the market level, the stock closed at \$174.26, with recent support near \$174.26, resistance near \$203.48, and 20-day / 50-day / 200-day levels at \$193.88 / \$199.09 / \$178.08. That means the timing call is driven by setup quality, not admiration for the business.

Bottom line: the company remains worth covering, but the current verdict is DO NOT DEPLOY. Any upgrade needs better technical repair and a cleaner risk-defined setup.

2. Company Snapshot

Ticker	RTX (NYSE)
Full name	RTX Corporation
Sector / industry	Industrials / Aerospace & Defense
